INTU FR COAT A

Fire rated ablative coat

TDS Technical Data Sheet

INTUSEAL[®]
passive fire protection manufacturer

→ PRODUCT DESCRIPTION

The firestop ablative paint **INTU FR COAT A** is a one-component product designed for sealing fire protection penetrations and expansion joints with fire resistance class up to **EI 240**. Under fire conditions and the influence of high temperature, endothermic reactions take place in the product. The paint absorbs heat to a large extent, delaying the impact of fire on structural elements. The product is used in combination with mineral wool board with min. density 150 kg/m³ and minimum thickness 60 mm for penetration seals and with min. density 50 kg/m³ for linear joint. The ready-made/painted firestop boards **INTU FR BOARD A** are also available for sale.

→ APPLICATION

INTU FR COAT A is designed for fire protection of:

- penetration seals with single or group of non-flammable pipes in floors or walls
- expansion joints in floors or walls
- electric cables in walls (combined with paint **INTU FR COAT I**)

Rigid walls: The wall must be minimum thickness 150 mm. Must have concrete, cellular concrete or masonry structure, with minimum density 600 kg/m³.

Rigid floors: The floor must be minimum thickness 150 mm. Must have concrete, cellular concrete or masonry structure, with minimum density 1700 kg/m³.

Approximate consumption of **INTU FR COAT A** for mineral wool boards painting: 1,7 kg/m² – for a dry film thickness of 1mm.

INTU FR COAT A DRYING TIME

Paint condition	Dry to the touch	Complete dry/total hardened
Time	60 min	360 min

* Test was made for paint 1mm thickness. Environmental conditions (humidity and temperature) have impact on drying time.

→ AVAILABILITY

Contents	Colour	Packaging	Pallet	Article number
3 kg	White	Pail	147	INCA3KG
12,5 kg		Pail	48	INCA125KG
260 kg		Barrel	2	INCA260KG

→ INSTALLATION METHOD

- 1) Clean the surface of the hole and system components from grease and other contaminants thoroughly
- 2) Cut the mineral wool board (density: $\rho \geq 150$ kg/m³) to the correct size and place the wool board in the hole/gap

Application cases	
non-flammable pipes	expansion joints
3) Apply on pipe mineral wool insulation (density: $\rho \geq 37$ kg/m ³).	3) Put loose mineral wool ($\rho \geq 50$ kg/m ³) or mineral wool board in gap of 100 mm depth.
4) Paint mineral wool board and a part of the insulation by INTU FR COAT A according to solution details below.	4) Paint mineral wool with INTU FR COAT A on one side of the partition. Prepare a partition overlap min 5mm (solution details below).

→ TRANSPORT AND STORAGE

Store in dry and cool conditions at temperatures between + 5°C and + 25°C. Shelf life 12 months from the production date shown on the packaging.

→ COMPLIANCE

- Reference standard:
 - penetration seals: EN 1366-3 / ETAG 026-2 / EAD 350454-00-1104
 - linear joint seals: EN 1366-4 / ETAG 026-3 / EAD 350141-00-1106
- DoP 5/2019
- DoP 12/2019
- Penetration seals: ETA 19/0038
- Linear joint seals: ETA 19/0037
- Penetration seals: CoC 1488-CPR-0756/W
- Linear joint seals: CoC 1488-CPR-0763/W
- BREEAM certification
